Open Source

Git is a **free and open source** distributed version control system designed to handle everything from small to very large projects with speed and efficiency.

Git is **lightning fast** and has a huge ecosystem of **GUIs**, **hosting services**, and **command-line tools**.

Open Source

“We estimate the supply-side value of widely-used OSS is \$4.15 billion, but that the demand-side value is much larger at \$8.8 trillion.

We find that firms would need to spend 3.5 times more on software than they currently do if OSS did not exist.”

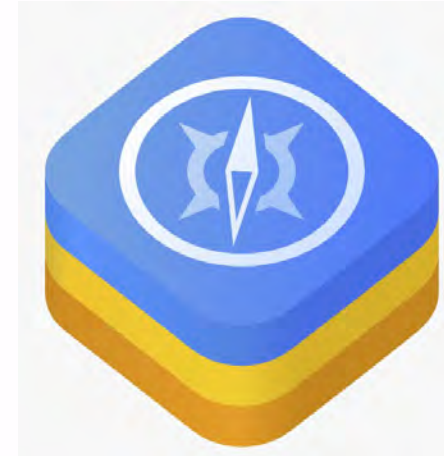

From ‘The Value of Open Source Software’

Use of Open Source

Igalia: Chromium on iOS & tvOS

Igalia: Chromium on iOS & tvOS

Building Blink for iOS

The iOS build supports compiling the blink web platform. To compile blink set a gn arg in your `.setup-gn` file. Note the blink web platform is experimental code and should only be used for analysis.

```
[gn_args]
use_blink = true
ios_content_shell_bundle_identifier="REPLACE_YOUR_BUNDLE_IDENTIFIER_HERE"
ios_chromium_bundle_id="REPLACE_YOUR_BUNDLE_IDENTIFIER_HERE"
```

Note that only certain targets support blink. `content_shell` and `chrome` being the most useful.

```
$ autoninja -C out/Debug-iphonesimulator content_shell chrome
```

Blink for tvOS builds and running

Note: To build Blink for tvOS, make sure that the tvOS SDK and the tvOS simulator are installed on your system.

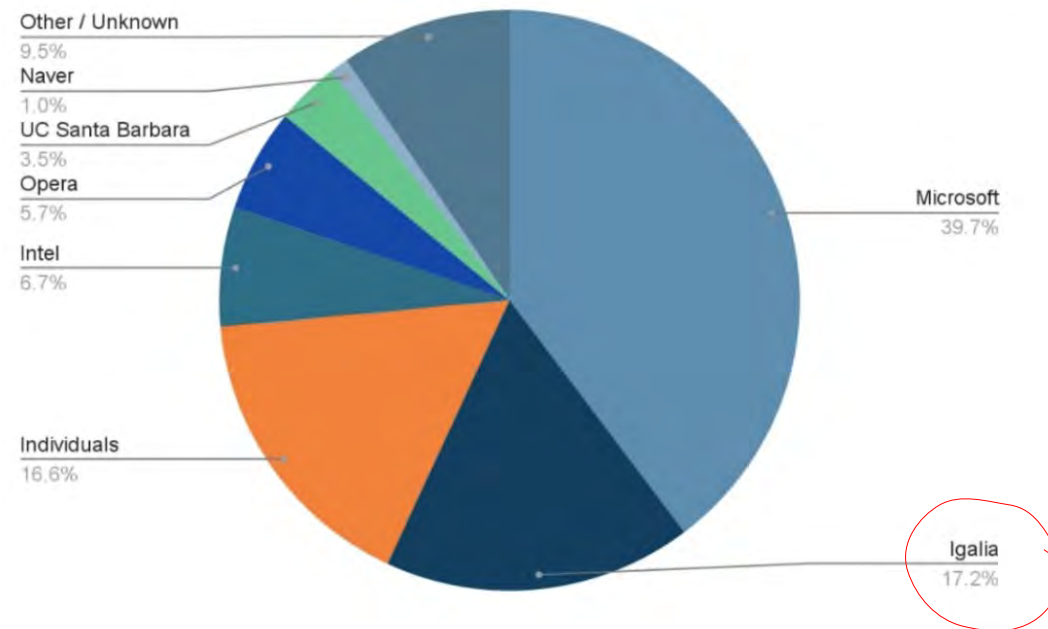

Blink for tvOS is an experimental project that aims to port Blink to Apple tvOS. Due to platform limitations, specifically because tvOS does not support multi-process applications, Blink for tvOS runs in a single-process mode only. As a result, there is no security isolation, since all content runs within the same process. Therefore, it is intended solely for loading trusted content. Please note that this project is still under development and considered unstable.

Wrap up...

Open Source,

- More people can participate in open source.
- Understanding, Deciding, and Writing
- Open source keeps evolving.

감사합니다
